Laundry

AEG-Electrolux washing machines are designed to give you perfect wash results every time, with a host of advanced features and a wash programme to suit every need.

Top performance at all levels.

NEW silent system... whisper quiet operation.

The kitchen is fast becoming the heart of homelife. So, not surprisingly, quiet appliances are becoming a top priority to ensure the perfect kitchen ambience. Maintaining a peaceful home environment is a primary objective for AEG-Electrolux – so you need no longer worry about appliances intruding on your conversations or interrupting your thoughts. Dedicated to producing a quiet, high performance laundry range, we have developed advanced technology to ensure our washing machines are as unobtrusive as possible.

Inverter motor.

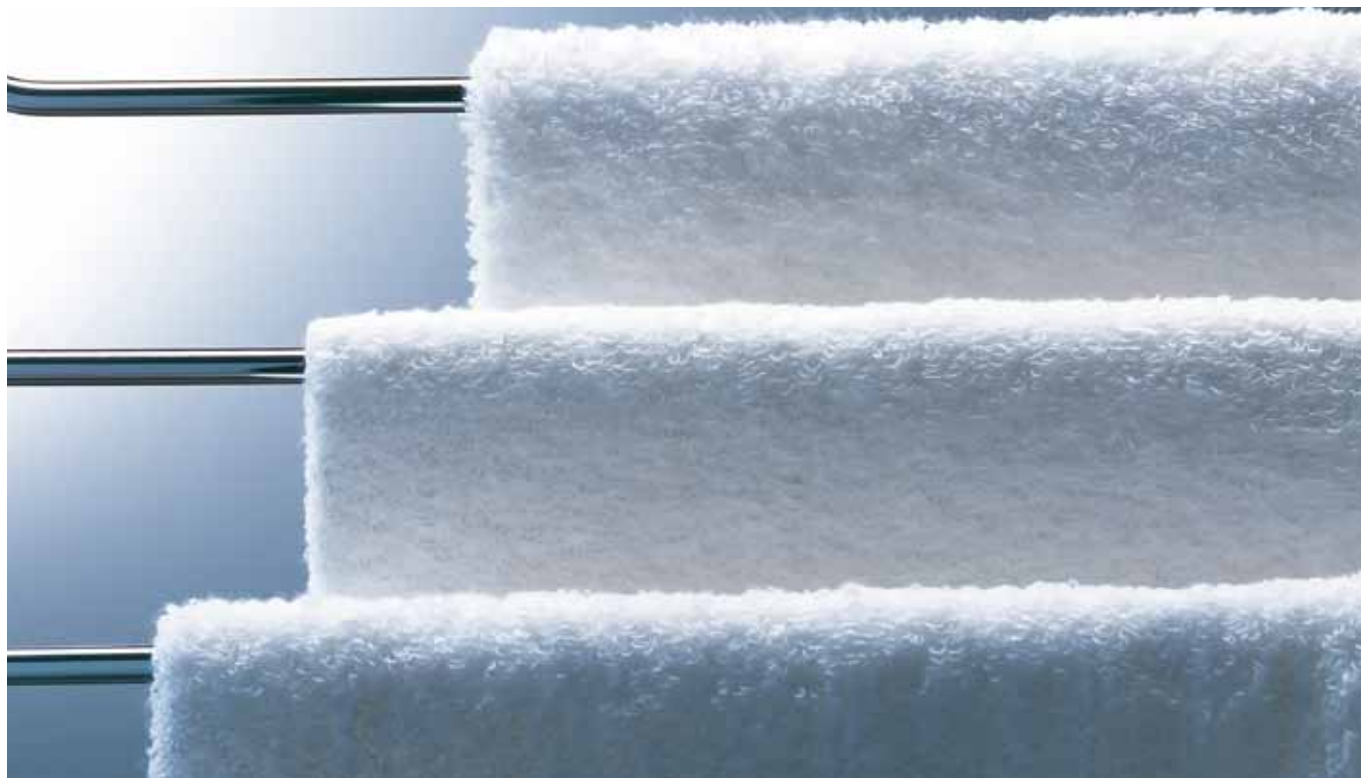

This powerful new brushless constructed motor is not only designed to be more durable but also provides a superior performance versus standard motors. With this advanced technology, AEG-Electrolux washing machines provide a more powerful wash performance, shorter wash times and quieter operation during washing and spinning cycles. Now in the 8kg Tumble Dryer.

Energy efficient.

All AEG-Electrolux washing machines are A-10% and some even go up to A-30% energy efficiency. Our washing machines are designed to deliver best in class wash results every time, optimising on the use of energy, water and time.

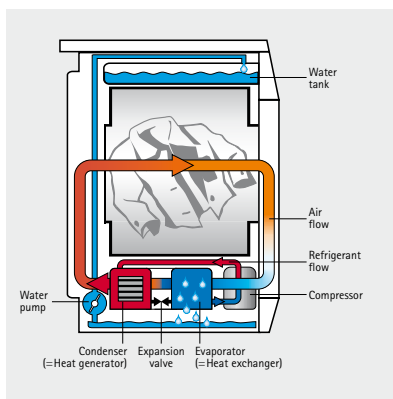

Superior insulation.

Our extra quiet models are equipped with noise insulation panels, which absorb high frequency noise, making our washing machines noticeably quieter.

The world's first 'A' rated tumble dryer.

Many people have concerns about buying a tumble dryer due to their traditionally high energy consumption. AEG-Electrolux was the world's first manufacturer to provide an 'A' rated tumble dryer. The T59850 takes as little as 85 minutes to dry cottons. It uses a special 'heat pump' technology which works like a refrigerator in reverse to achieve this unprecedented energy efficiency. The energy consumption is so low, it actually exceeds the requirements for an 'A' energy rating by 40%. So you get all the benefits of tumble drying at a much lower running cost. The T59850 also comes with a drain kit which eliminates the need to empty the tank after every drying cycle.

Large load capacity.

With more demands being placed on your time, it makes perfect sense to wash as much as you can in one go. AEG-Electrolux has a range of 7kg and 8kg load capacity machines, perfect for households with a lot of laundry to take care of. With a 7kg or 8kg load (approximately 35 to 40 shirts can be washed), the average weekly wash can be completed with ease. These machines also optimise on water, energy and time when washing smaller loads.

In addition to the 8kg washing machines, AEG-Electrolux introduces the 8kg washer dryers and tumble dryers to suit your every need. Now you can wash and dry large duvets saving you those expensive trips to the laundrette.

Programmes for outstanding performance on clothes.

Combating those stubborn stains is always a problem. AEG-Electrolux washing machines have a number of programmes to ensure outstanding wash results:

20 minute pre-wash.

The **20 minute pre-wash** option loosens dirt prior to the main wash, ensuring the ultimate washing performance.

Quick intensive.

The **quick intensive wash programme** washes a 5kg (up to 25 shirts) wash load in 1 hour, delivering A wash performance. It is the only one of its kind in the market that delivers A wash performance in an hour for a 5kg load capacity.

Stain action.

The **stain action** function allows you to use stain removing agents with bio powder. By having a fourth compartment for dispensing stain remover, the powder is only dispensed once the wash is at 40°C making stain removing treatment more effective.

Perfect rinsing results.

To produce the perfect rinsing results the rinse plus programme can be added to the wash cycle. If too much detergent is sensed on the final rinse, an additional rinse is automatically added.

Advanced fuzzy logic.

Advanced fuzzy logic calculates the precise amount of water required for the main wash and rinse, giving the best possible wash and rinse performance with the lowest possible detergent and energy consumption.

Advanced rinse technology.

Our washing machines also have advanced rinse technology where water is pumped in above and below the load resulting in a more efficient rinse.

Steam function.

Our AEG Prosteam tumble dryer comes with a steam function which allows you to refresh expensive clothes which are usually taken to the dry cleaners.

Precise control for peace of mind.

Precise control for peace of mind.

AEG-Electrolux washing machines have LCD Graphic / LED displays to provide instantaneous feedback about the programmes and options selected, to ensure complete control. The time display feature accurately indicates when the programme will end or the time remaining, dependent on model.

Sensor drying.

The sensor dryer on all AEG-Electrolux tumble dryers and washer dryers gives you exceptional drying results and total control. Simply choose the required level of dryness on the rotary control, from 'iron dry' for slightly damp clothes to 'extra dry' for ready-to-wear results. The machine will then sense when the clothes are dried to the level specified. There is no need to keep checking to see if your clothes are ready, the sensor dryer will do all the work.

Memory programmes.

The 8 series models L86850A and L84950A3 are built to remember the programmes chosen by you. With two memory options these washing machines remember your programmes and store them for the next time, so being in control has never been easier.

Control over safety.

AEG-Electrolux washing machines are always designed with safety in mind:

Flow sensors.

Measure the exact amount of water taken into the machine, to economise water usage and help protect against flooding.

Automatic child safety.

Keypads can be locked to ensure temperatures and programme selectors cannot be changed – making certain your laundry is always safe.

Weight sensor and dosage recommendation.

With your new AEG L84950A3 and L86850A there is no risk of over dosage of detergent! This model comes with sensor electronics which senses the exact weight of the wash load and recommends the appropriate detergent dosage in the large LCD graphics screen. You get the best in class wash performance whilst it takes good care of your clothes.

Aqua control.

Aqua control is an internal system which helps to keep control by monitoring the water level to detect leakage.

Perfect time control.

Time save.

Available across the range, the time saver option gives total control over the length of your wash. It offers options of 'daily', 'quick' and 'super quick' so that the length of the programme can be reduced as necessary to suit your schedule. The wash time can be reduced by up to 25% for a 6kg load at 60°C by pressing the button once and up to 60% by pressing the button twice – and still provide an A rated wash.

Ultra quick wash programme.

This NEW quick wash is a complete programme that allows you to wash 3kgs at 30°C in just 20 minutes! Making washing small loads efficient and easier than ever before.

Refresh programme.

Our washing idea for 'worn once' clothes. Refreshingly quick. In the refresh programme up to 3kg (15 shirts) of clothes are washed at 30°C in 30 minutes.

Delay start.

The delay start option for up to 20 hours ensures that laundry is ready exactly when required.

Easy iron.

The easy iron programme reduces ironing time by up to 50% through actively reducing creases in fabric caused throughout the wash and spin cycle.

Caring for your laundry.

Programmes that care for your clothes.

AEG-Electrolux laundry appliances have a range of programmes designed to take extra care of your clothes and still provide the best wash performance.

Rinse hold.

The rinse hold facility helps reduce creasing and musty odours from leaving damp clothes in the drum. Clothes remain in water from the final rinse, until it is convenient to complete the wash.

Variomatic spin.

Variomatic spin is another feature which minimises creasing by alternating progressively faster spinning with frequent tumbling stages, giving you the best possible wash.

Sensitive option.

Designed specifically for people who are extra sensitive to dirt, dust, pollen etc. Works on cotton and synthetic programmes where fabric is gently moved around and has a default extra rinse option, with no early intermediate spins ensuring particles are rinsed out effectively.

AEG-Electrolux recommend the Ariel Range for outstanding cleaning and fabric care.

Washing machine programmes.

AEG-Electrolux has the only **wool programme** in the market with a cool down phase at the end of the wash phase. This prevents chill-shock when the cold rinse begins, ensuring shrinkage is minimised.

- The **silk and lingerie programmes** are designed to care and protect very delicate fabrics, ensuring optimum wash results with maximum care.
- The **delicate programme** is designed for mixed fabrics found in delicate clothes.
- We know washing by hand can be unpleasant, so now there is an extremely gentle programme that allows 'handwash' labelled items to be washed by machine.
- Some of our AEG-Electrolux washer ranges now come with a special **SuperEco** wash program for those who are environmentally conscious! In the SuperEco program you can save upto 80% of energy compared to a regular wash still delivering A wash performance. You can wash upto 3kg wash load in an hour using SuperEco wash option.

Tumble dryer programmes.

Our tumble dryers dry clothes like the outdoors, indoors, with a range of gentle programmes for unrivalled clothes care. AEG-Electrolux use advanced technology to develop programmes to care for all types of fabric, designed to keep your every need in mind.

- We have a special **jeans programme** for thicker fabrics, ideal for drying the seams of clothes such as jeans.
- There are special cycles with cool air and gentle tumbling so that even delicate fabrics such as wool and silk can be dried with confidence.
- To simply refresh clothes that have been in the cupboard there is the **freshen up option**.
- To dry clothes so they are ready to wear or store there is the **extra dry programme** and the **storage dry programme**.

Venting options.

The 3 vent positions at the back of the tumble dryer gives flexibility to the consumer to position the tumble dryer around the vent.

Long anti-crease option.

AEG-Electrolux tumble dryers go into an automatic anti-crease phase which keeps the laundry loose and free of creases at the end of the drying cycle. In the anti-crease phase the drum rotates at regular intervals constantly moving the clothes. With the long anti-crease option, the 30 minute anticrease phase is lengthened by an additional 60 minutes. The laundry can be removed at any time during the anti-crease phase.

Indicator for full tank and filter/condenser cleaning.

The entire AEG-Electrolux condenser tumble dryer range have indicators to alert when ever the water reservoir is full and needs to be emptied or if the fluff filter or condenser need to be cleaned.

Reverse tumble.

The entire AEG-Electrolux tumble dryer range comes with reverse tumble action which takes gentle care of the clothes and reduces tangling and creasing.

8kg inverter motor.

AEG-Electrolux for the first time introduces the advanced inverter motor technology in the tumble dryer segment. The precise spin control that can be achieved using an inverter motor is ideal to dry woollens in a rotating drum without damaging it! The drum is spun at a speed which enables the woollens to cling to the surface of the drum without getting stretched and is dried by the air circulation, taking the best care of your woollens.

Perfectly coordinated.

Perfectly coordinated.

AEG-Electrolux laundry appliances are perfectly coordinated. This uniform appearance will enhance any kitchen or utility room, with stylish push button controls, innovative LCD and LED displays and stainless steel embossed detail.

Interior light.

The interior light drum on the L84950A3 and L86850A washing machines and all our tumble dryers automatically light up when the door is open for greater visibility when loading and unloading. AEG-Electrolux appliances are also easy to load and unload, with large 30cm portholes and 165° door opening.

Flexible design.

There are two types of AEG-Electrolux tumble dryers, the condenser dryer and the vented dryer. The condenser dryer condenses the moisture back into water and fills a large water container that can be poured down the sink. This dryer can be situated anywhere in the home.

The vented dryer expels warm air from the machine via a venting kit. It is essential that this air is vented outside, therefore the appliance must be situated near an outside wall. Vented dryers come with a venting kit consisting of a venting hose and connectors for the appliance and the wall.

Angled control panel.

Our new control panels are designed to tilt up at a 19° angle - making setting your programmes easier than ever before!
